

LED-Strip B12

Product Sheet

Introduction

FEATURES

- System compatible with other series from Schnick-Schnack-Systems
 - Free patch, colour change and scroll text control software
 - Made in Germany
-

- Premium quality LEDs
 - Optimum RGB colour mixing in an SMD-component (no coloured shadows)
 - Equal colours due to the best possible bin intensity and batch-based voltage adjustment
 - Wider 115° beam angle
 - Camera friendly dimmer control
 - Equal brightness despite different cable lengths due to integrated linear regulator
 - Enough "headroom" for longer durability
-

- Direct control with DMX 512-A
 - Direct connection to 24V DC
-

- Pliable, fiberglass reinforced board
- Re-useable for various applications
- Through hole connectors enable many mating cycles
- Minimal surface temperature
- Diverse mounting options

Use

The Product B Series LED Strips are equipped with high quality, efficient RGB-LEDs. Each individual LED on an LED strip can be controlled as a group and are therefore the ideal LED light source for all uses where surfaces, edges or decorative elements are going to be illuminated with any color from a short distance. The B Series LED Strips are most often used, among other applications, to set color accents in vaults or on walls, to backlight steps, floors and expansive wall surfaces as well as to accentuate edges or for lateral light input into large acrylic glass surfaces.

Technology

The B12 LED Strips come in lengths of 125mm and 250mm with ten or 20 LEDs in a 12,5mm grid. Thanks to these practical dimensions, the LED Strips can follow almost any curve or bend.

The three primary colors are already mixed in the light emitting diodes so colored shadows are avoided. Active current regulators on the board can balance out voltage differences that arise from varying cable lengths. Due to the arrangement of the LEDs there is no color shift in the horizontal viewing angle when mounted vertically.

When using diffusers, the distance needed to create a homogeneous surface depends on the material. There should be at least 3.5 cm from the topside of the LED to the diffuser.

The LEDs are mounted with board holders.

Control

The B Series LED Strips are controlled with the Long Distance Controller, the Sys One or the System Power Supply 4 or 4E with Intelligence – or for smaller installations also via an appropriate power supply and a Big Intelli RGB.

This product is CE certified and UL accredited.

ESD warning

Please be aware that electrostatic discharges can destroy LED boards, and our experience shows that this does happen. During assembly, we recommend wearing at least one antistatic wrist strap and avoiding static discharges – such as those that arise when removing protective film or dry cleaning acrylic glass, for example – near LEDs! Antistatic materials should be used when packaging the LED boards. Normal bubble wrap or other plastic bags are not suitable.

For reasons of safety and radio shielding, please only use systems we have approved to provide a power supply for our LED components. All technical information is based on the version at the time of printing.

We reserve the right to make technical specifications in terms of a product improvement without prior notice. Printing – even excerpts – requires the written consent of Schnick-Schnack-Systems GmbH.

Why Schnick Schnack Systems?

As installation times become increasingly shorter the complexity of systems simultaneously increases as do the requirements of customers.

We are a supplier who delivers high-quality reliable systems – under tight deadline constraints that are not only quick to install but also simple to operate and service.
